SUPPLY CHAIN
RISK MANAGEMENT

Business survival relies heavily on a resilient and secure supply chain. The nature of the current threat environment and enhanced risk attributed to the ubiquitous use of open-source software jeopardizes supply chain resiliency. To make matters worse, third-party vendors are frequently provided access to an enterprise's network which overexposes any organization to a variety of externally derived risks that could lead to compromise of intellectual property and a substantially increased risk of regulatory action. GSIS offers product lines that provide external validation of the cybersecurity posture of critical vendors and external partners which, ultimately reduces operational, financial, regulatory, and reputational risk and should an provide an organization with valuable peace of mind in an uncertain world.

REMOTE ENVIRONMENT DIAGNOSTIC SERVICES (REDS)
CYBER POSTURE RATING

GSIS offers a company an excellent way to limit their cyber risk as well as improve their own cyber hygiene through a non-intrusive scan of a company's IP address(es). These tools provide a critical view of technical assets exposed to potential criminals/hackers via the internet, thereby identifying a pathway to reducing risk.

CYBER SECURITY RISK ASSESSMENT AND STRATEGIC IMPLEMENTATION PLAN

GSIS, in full collaboration with a client and its key third-party partners, will conduct a full-scale cybersecurity assessment to determine system and program proficiency against established industry frameworks. GSIS goes the distance by providing a roadmap for improvement based upon a client's risk posture and budget to further reduce the supply chain risk.
